MEMORANDUM FOR: Executive Director

SUBJECT: TID External Photogrammetric Education Program

1. For the past four years TID has been permitted to engage in what it considers a very successful advanced education program at selected universities, primarily in the study of photogrammetry. It is TID's plan to extend this external training program to include the field of photo science.

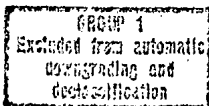

2. This program has been a stimulus and incentive to the photogrammetric personnel in TID, each looking forward to the time that he may be selected to participate. The results have been most rewarding not only to the Technical Intelligence Division, but to each individual concerned. The experience has not only increased their knowledge and capabilities in the field of photogrammetry, but beyond that has broadened their scope as an individual.

3. An NPIC reorganization probably will split TID's photogrammetric personnel, those in the measurement work going one way, those in the analytical another. Also each may well be under new leadership. I hope that the new management of each photogrammetric group will see fit to continue this education program that has paid off so well in the past. I feel it would be a great mistake to let this on-going successful program become lost during the Center's regrouping. It is my hope that the Office of the Director, NPIC, will suggest to the new NPIC managers of the photogrammetric personnel that this program be considered for continuation.

50X1

  
Chief, Technical Intelligence Division
